
Plan Overview

A Data Management Plan created using UCT DMP

Title: Honours mock project

Creator: Johan Cronje

Affiliation: University of Cape Town

Template: UCT Student Generic DMP

ID: 8648

Last modified: 24-02-2026

Honours mock project - Student Outline DMP

1. General guidelines

PURPOSE OF THIS TEMPLATE

The purpose of the Outline DMP is to indicate your initial plans for how your data will be collected, shared and stored, and to give you a chance to think about these data-focused aspects of the research process. As you begin doing your research, your data process may change, and it is perfectly acceptable to change your data management plan to accommodate the changes in your research process.

Indicate below that you understand the purpose of completing this Outline DMP template.

- I understand the Outline DMP template is a projection of my anticipated data management planning requirements and should be updated as my project develops.

2. Authors and supervisors

PROJECT NAME

Replicate the title of your project, dissertation or thesis exactly as it appears in your proposal document.

My mock honours project

PERSONAL DETAILS

Indicate the name(s) and student number(s) of the student(s) who will be involved in this project, dissertation or thesis.

Johan Cronje CRNJOH021

SUPERVISOR(S) DETAILS

Indicate who will supervise this project, dissertation or thesis. If you do not yet have a supervisor, leave this section blank.

Sill Looking

3. Data Collection/Generation

ORIGINAL DATA

Indicate whether you will collect or produce original data for your study. If yes, briefly describe the type of data and how you plan to manage it.

If you are unsure at this time, indicate what you think you are most likely to collect. If you are not intending to gather or collect your own data, declare that here.

- I intend to collect original data (described below).

I intend to measure the germination rate of different sized common beans which are being watered with either normal tap water or tap water with extra salt added. The mean germination time of a fixed quantity of beans in one petri dish will be collected and put in an excel spreadsheet next to the treatment assigned to the bean

DATA RE-USE

Indicate if you intend to re-use existing data, either from online searches or from datasets provided by your supervisor, lab, or funder.

If you are not intending to re-use existing data, declare that here. Also note any restrictions that apply to the re-use of data.

- I do not intend to reuse existing data.

No other data will be re-used for this study.

DATA SENSITIVITY & SECURITY

Indicate whether your research data may contain sensitive, personal, disclosive, or otherwise at-risk information.

If yes, briefly describe the type of sensitivity involved and the steps you will take to secure and control access to your data.

If you are unsure at this stage, indicate what you think is most likely. If your data is not sensitive, declare that here and state how you will still ensure responsible storage.

- My data is not sensitive or at-risk.

My data is about the common bean and therefore not considered sensitive. The data will be stored on a secure folder on my UCT Onedrive account. Data will be backed up once a day.

4. Data Storage

DATA SIZE ESTIMATE

Indicate the estimated size of your completed dataset, and indicate whether or not you will need to access additional data storage facilities. If such storage is not provided by your unit or department, you may need to factor in the cost of purchasing additional storage space.

- 20GB or less

DATA BACKUPS

Indicate how you plan to ensure your data is secure and retrievable in case of errors or hardware failure. Describe what procedures you will put in place to back-up copies of your data and where they will be stored.

- I intend to backup my data using a service provided by UCT (UCT GoogleDrive, UCT OneDrive, Netstorage, ZivaHub etc.).

I will backup the data once a day after collecting new data.

5. Data Sharing/Publication

DATA SHARING

According to UCT's [Research Data Management policy](#), research data should be made open by default, with provisions for making it closed in specific cases (such as ethical considerations or potential commercialisation).

Indicate whether you plan to publish your research data.

- If yes: say where you will publish it and what licence (e.g., Creative Commons) you will use.
- If no: explain why, and refer to any ethical issues, commercial or patent intentions, or data-use agreements that prevent publication.

- I intend to share my data (details below).

I will share my quantitative data on Zivahub when my project is done under a CC-BY license.

DATA DESCRIPTION

What information will you include to help others understand and use your dataset?

(For example: a short description of your study, explanations of variables, survey questions, or keywords. These are known as metadata.)

I will include how and where the data was collected. I will include what units my data was recorded in. I will also include a list of instruments that was used to take the measurements.

6. Budget

BUDGET

Indicate any costs specifically relating to the management and curation of your data, such as purchasing additional storage space, digitisation of physical media, data storage or curation charges, and data audits. Most student research will be able to make use of free options provided by UCT and will not have to budget for data costs.

- I do not anticipate any data costs as my data is less than 10GB, and I will be using a storage system provided by UCT (UCT GoogleDrive, UCT OneDrive, Netstorage, ZivaHub, etc.) to curate my data.

Honours mock project - Student Full DMP

1. Project Details

PROJECT NAME - Replicate the title of your project, dissertation or thesis exactly as it appears in your proposal document.

The effect of salinity and seed size on sprouting

PERSONAL DETAILS - Indicate the name(s) and student number(s) of the student(s) who will be involved in this project, dissertation or thesis.

Johan Cronje - CRNJOH021

SUPERVISOR(S) DETAILS - Indicate who will supervise this project, dissertation or thesis. If you do not yet have a supervisor, leave this section blank.

still looking for supervisor

2. Project Summary

RESEARCH SUMMARY

Briefly summarise your study. Include the study's objectives, design, and methods.

This study aims to see if the size of a common bean seed as well as additional salt in the water provided to the seed will effect the time it takes for the seed to germinate.

Ten beans of a certain size class will be added to one petridish and covered with paper towels. These seeds will then be water either with normal water or water containing salt depending on what treatment was assigned to them. The seed size and watering solution both make up one treatment assigned to a petridish at random. With five replicates of each treatment. The petridishes will be kept in a constant 25 degree celsius room which is also kept at constant humidity.

The petridishes will be water once a day as well as checked if the beans have germinated. After 2 weeks the average germination time will be calculated per petridish and the number of ungerminated beans will be noted down

3. Data Collection/Generation

ORIGINAL DATA

If you are collecting your own data, describe the data you are gathering for your study. Briefly describe the type, scope and amount of the data you are producing.

- I am collecting my own data.

I will collect quantitative data in the form of the average germination time of a set amount of beans in a petridish. Each petridish will have 1 assigned treatment out of a possible 4. Each treatment will have 5 replicates, meaning I plan on collecting 20 datapoints.

DATA REUSE

If you are re-using data from third-party sources in your study, record pertinent details here such as the source of the data, the extent of the data, usage rights or restrictions pertaining to the data, and how it incorporates into your study.

- I am not using existing data in my study (skip question).

4. Data Quality Control and Formats

QUALITY CONTROL

Describe what measures you are taking to ensure the data you collect are of high-quality.

Only one person will be collecting and entering the data to reduce possible differences in data collection. A constant temperature and humidity room will be used in the study to help reduce unnecessary variation in the data.

FILE FORMATS

Indicate the formats in which your data will be collected and processed.

Clarify whether you will use specialised, proprietary software to produce and access your data and whether you will convert to open, accessible formats for long term access and preservation. In the case of physical objects (such as artworks or models) indicate whether these will be digitised or otherwise preserved for accessibility.

The data will be entered and saved in an excel format. The analyses will be done in r.

5. Data Management and Documentation

STORAGE AND BACKUP

Describe how your data is being stored and backed-up. If you are using a data service provider, provide details on how long they will retain the data.

My data will be saved on my personal pc and backed up onto google onedrive. During the analyses of my data it will also be uploaded on a github repository

DATA MANAGEMENT

Describe how you organise and manage your data.

Specify folder structures and any file-naming conventions or community data standards you have adopted.

The data will be saved in two sepperate folders, one named unmodified data and one named modified data. These will be stored in a folder with all of the other relevant folders for this study.

DATA DOCUMENTATION

Describe what supporting notes or files (documentation) you will provide. Documentation helps others interpret your dataset, with details such as variable definitions, coding explanations, and README files.

I will add a readme file which describes how the data was collected, in what units the data was collected, what instruments where used in the data collection and for how long the data was collected, as well as all the variables that were kept constant throughout the experiment.

METADATA STANDARDS

Explain what structured information (metadata) you will provide about your data. Metadata helps others understand the context in which the data was collected, including methods, instruments, and provenance.

the readme file described above will contain the neccessary metadata.

6. Data Security and Confidentiality

SENSITIVE DATA

Indicate to what extent your data are sensitive.

Describe how you will control access to your data. Indicate whether you anticipate a need for encryption or password-controlled access, and if so, how you will enforce that access.

- My data is not sensitive or at-risk

The data can't be used to harm anyone and is therefore not at-risk or sensitive. Therefore it will be saved on my personel pc and backed up onto onedrive which is password controlled access.

ETHICS AND PRIVACY

Describe, as per your Ethics Clearance form or other similar documentation, any ethical or privacy issues that your data are subject to (if any). Summarise the main risks to the confidentiality and security of information related to human participants, the level of risk, and how this risk will be managed. If your project did not require ethical clearance, you may ignore this section.

- I do not require ethical clearance for my research.

7. Data Sharing and Open Access

DATA PUBLICATION

Do you intend to publish your research data?

If you are working with sensitive data or are re-using third-party data, are there any restrictions or conditions attached to your datasets that affect data sharing, reuse, or attribution? If so, please describe them.

If you are not sharing your data, provide the appropriate justification as per the UCT Research Data Management guidelines.

- I do intend to publish my data.

No restrictions on publishing my data.

DATA REPOSITORY

Where will the research data be deposited or made available at the end of the project?

I will share my quantitative data on Zivahub when my project is done

DATA LICENCE

Indicate under which licence you intend to share your research data.

- CC BY

8. Relevant Institutional or Study Policies

Indicate the relevant departmental, unit, or institutional policies that influence your data management activities.

this project is not funded by any entity and therefore not subjected to any policies. However this study will take place at uct and are therefore the following policies apply, UCT intellectual property policy, UCT Open acces policy and the Uct Research management policy
